Lesson 27: Division

Purpose of lesson: You will practice the basic division facts, using the multiplication table if necessary.

Multiplication Tables

</tbody>
</table>

Remember this chart? You can use the multiplication grid to solve division problems.

Find the **vertical** column representing the number that you wish to divide by (the **divisor**). Follow the **vertical** column down to the number being divided (the **dividend**). The answer (the **quotient**) will be found on the corresponding **horizontal** row. Let’s try 35 ÷ 7. We’ll write it this way:

\[ 7 \longdiv{35} \]

Find 7 at the top. Move your finger down until you reach 35. Then follow across until you reach 5. That’s your answer! You can also reverse the process (start on the 7 down) and you will get the same answer. Try finding 35 ÷ 5. Did you get 7? Great.
Now find the answers to these:
